Resume

I saved 100k + USD for my employer using my PowerShell automations

Code <u>Enhance</u>ment

➤ Check if the module is installed

➤ If module is installed, Continue

➤ If module is **not** installed, Install it first and then Continue

Code Enhancement

Completely remove the dependency on logging module from our Validation Code.

Review

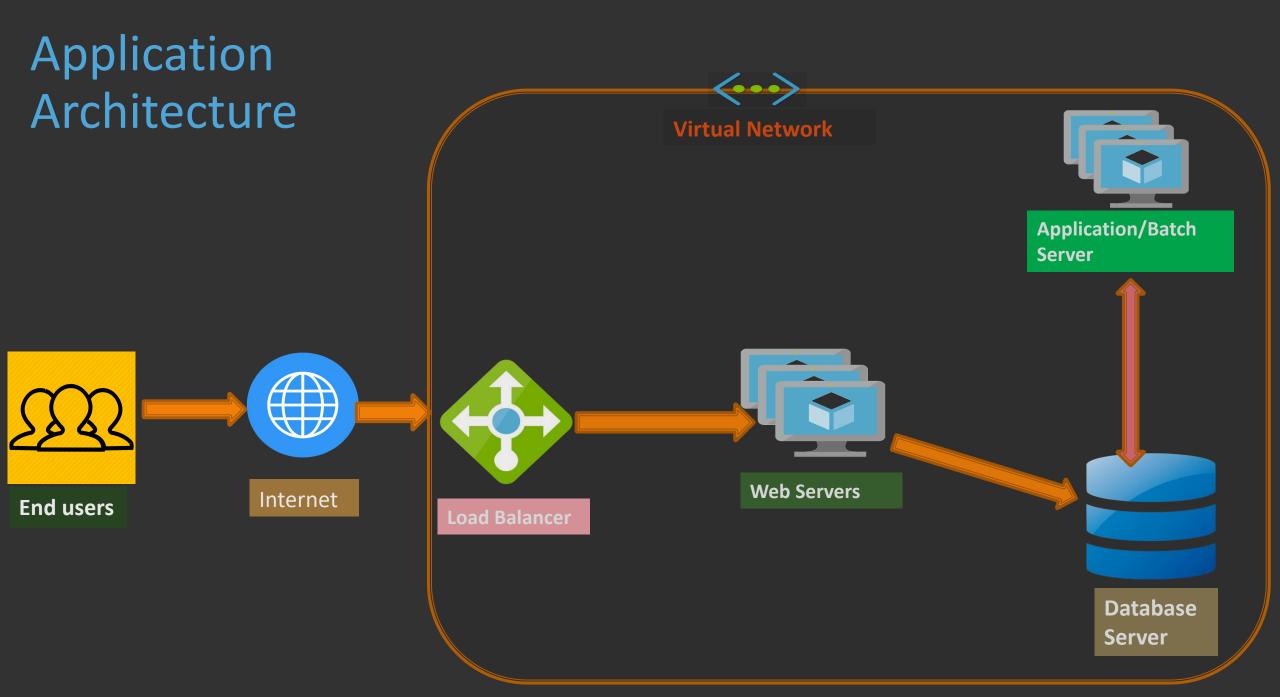

Please provide your valuable short review/feedback about this automation in the next 15minutes.

Implement the automation for your needs and Don't forget to send me the screenshots of your Report.

Thank You

Lab Setup

Application Architecture

Deploy Resources in Cloud

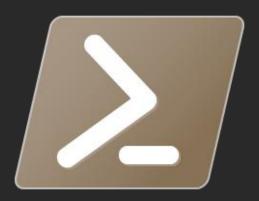

Deploy Script on the VMs

Script Execution

Logging

- XML Based Configuration File
- Logging
- Cloud Orchestration
- HTML Report

Why Need Validation Automation

To Validate Application Environments during:

- Monthly Patching
- Application Upgrades
- Database Upgrade
- Urgent Patches
- Resolving critical cases

Automating System & Application Validation Process

Validation Report

Configuration File

Logiles

PowerShell Modules

- XML Based Configuration File
- Logging
- Cloud Orchestration
- HTML Report

Importance of Validation Automation

Status

- INFORMATION
- SUCCESS
- FAILED
- EXCEPTION

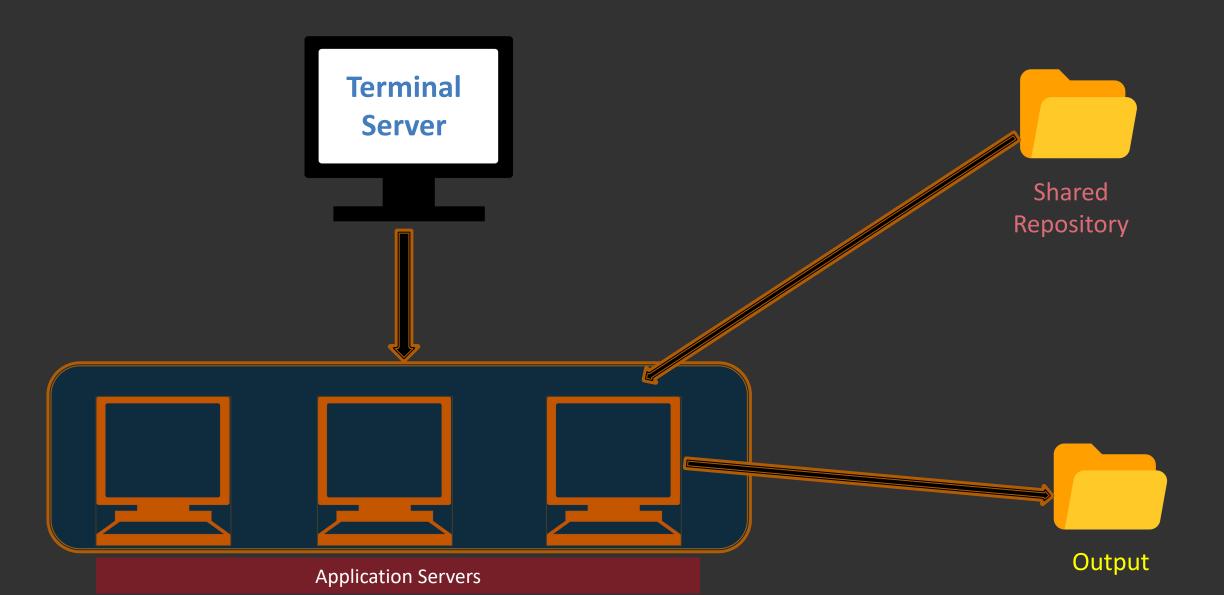

Configuration File

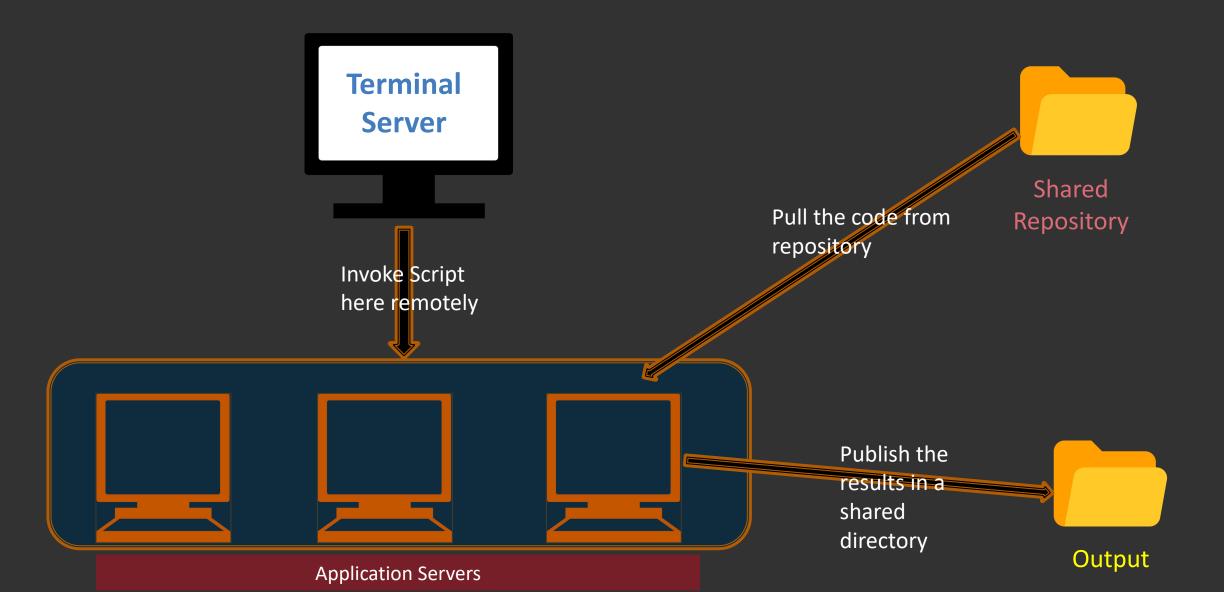

Files used to configure the parameters and initial settings for some computer programs

```
▼<Validation>
 ▶ <GlobalVariables>
   </GlobalVariables>
 ▼ <TIER>
   ▼<TIER name="web">
       <TIER_TASKS>SysInfo, URL, DiskHealth,
     </TIER>
   </TIER>
 ▼ <TIER>
   ▼<TIER name="app">
       <TIER_TASKS>SysInfo,URL,DiskHealth,
     </TIER>
   </TIER>
 ▼ <TIER>
   ▼<TIER name="sql">
       <TIER_TASKS>SysInfo,URL,DiskHealth,
     </TIER>
   </TIER>
 </Validation>
```

Remote Script Execution Architecture

Remote Script Execution Architecture

Planned Service Restart

Requirement

Due to excessive workload, Application Performance is impacted. To keep the application healthy, We are asked to:

Schedule a daily restart of IIS, Apache Tomcat and MyBatch Services at 4 AM.

A logfile containing the service status before & After restart is expected.

Automation: Planned Service Restart

Version1:

Centralized Solution to deal with restarting fixed services on multiple servers

Version2:

Centralized Solution to deal with restarting different services on different servers
